

Boost your market share with smart, reliable hydraulic solutions

We provide
you with the latest
know how and technology
within hydraulics

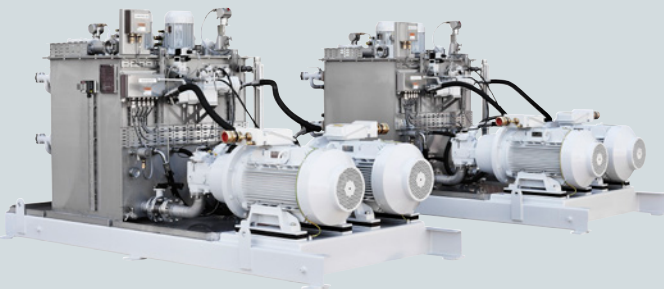

Hydraulics for any purpose

Serman & Tipsmark is your specialist in hydraulic solutions. We design, develop, produce and deliver customised hydraulic system solutions for:

- Industry
- Offshore/Marine
- Infrastructure
- Energy sectors

Our company was founded in 1994 and we are now a team of more than 50 dedicated employees. All share a passion for pressure, flow and delivering unparalleled systems to our clients.

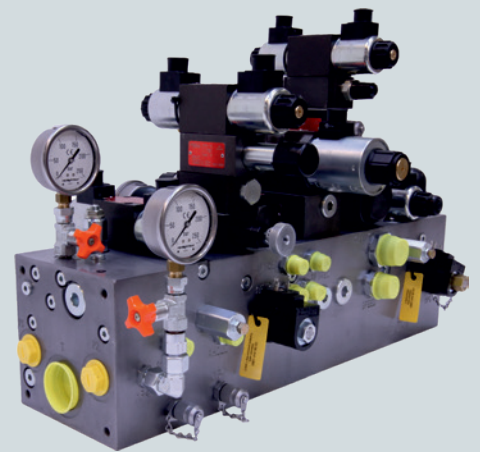

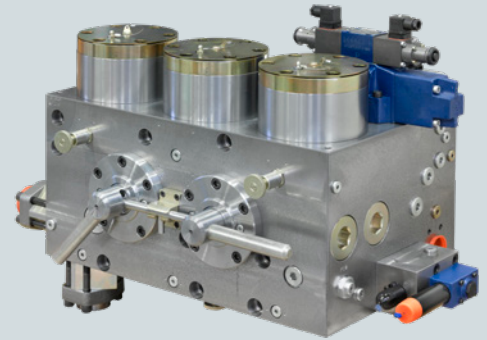

At Serman & Tipsmark we take pride in offering advanced motion and control solutions to meet and exceed your needs. This with outstanding technical, efficient solutions. Always remaining our trusted quality in all details. Our main product groups are:

- Advanced hydraulic motion and control solutions
- Test solutions for pressure, function and durability
- Manifold technology
- UHP units for torque tensioning (S&T Power Packs)
- Components from stock, easy web ordering and advice
- Service, maintenance and overhaul

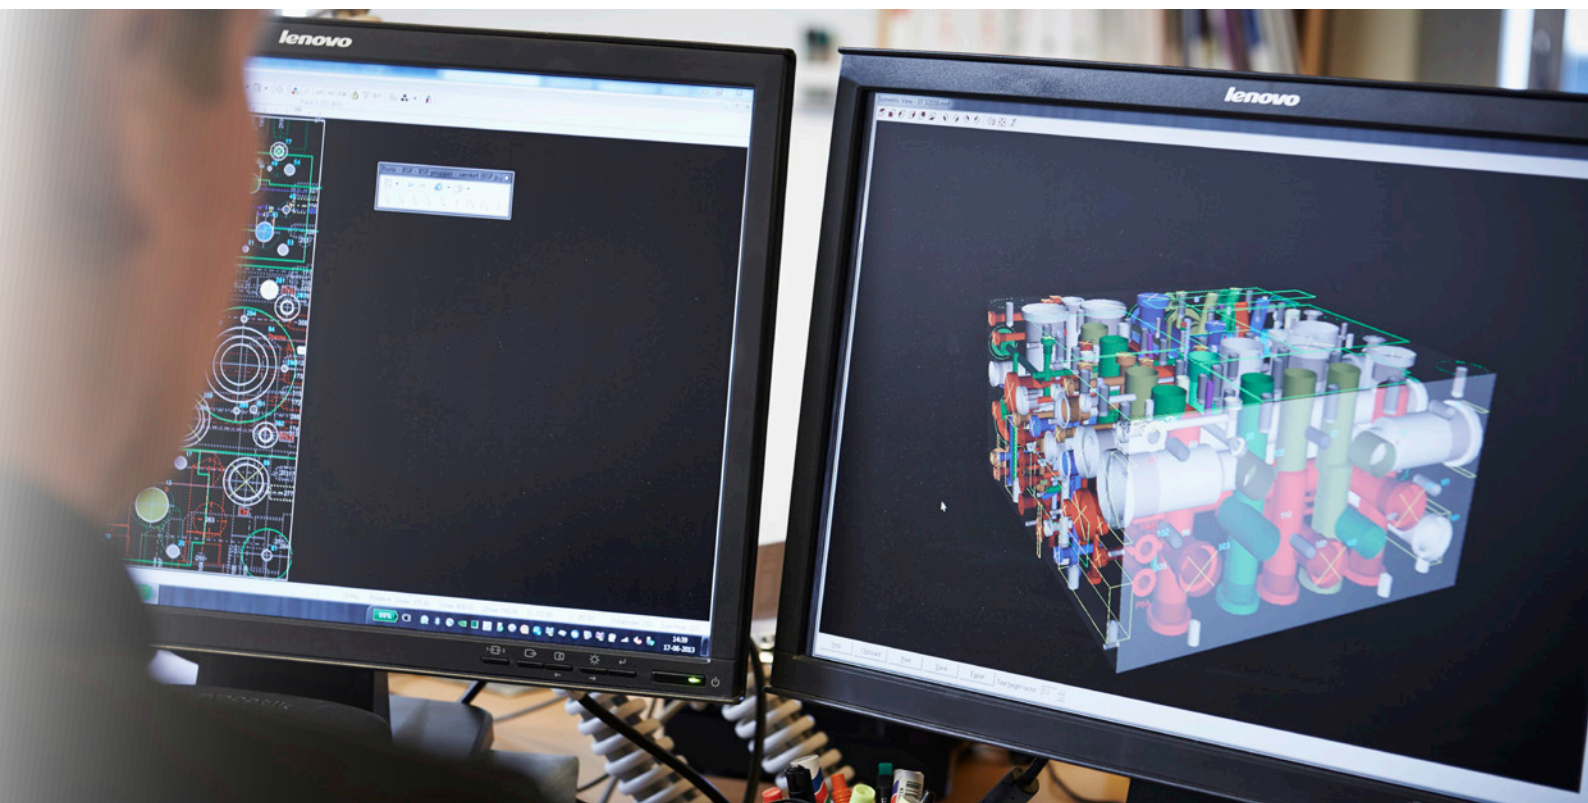

Benefit from our 30+ years of experience in compressing and controlling fluids and gases. Pressures range from below 1 bar up to 6000 bar. Our dedicated team ensure that you receive solutions that are both reliable and effective.

Our integrated hydraulic systems can be delivered in smart manifold solutions

These manifolds offer a wide range of benefits from space-saving design to enhanced reliability, ease of installation and purchase process savings.

Test bench for Flexible Risers

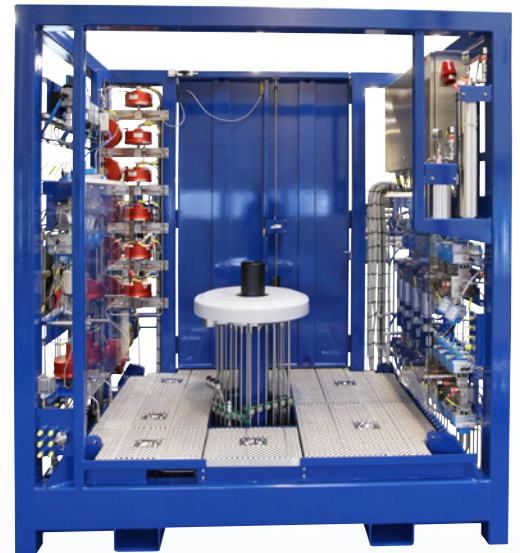

Turnkey hydraulic test systems

Serman & Tipsmark excels in the development of test systems. These range from basic hydrostatic pressure systems to fully automated total quality control of e.g.: valves, pumps, motors, hoses and vessels.

Our solutions incorporate data logging, digitalisation of the quality control cycle and robotised automation. All to ensure rigorous quality control on the product you want to supply.

Our test systems vary in both size, complexity and media. Also test systems with various gases have been developed over the years.

Integrated test system for hydraulic supply.

Pressure intensifier unit for subsea components

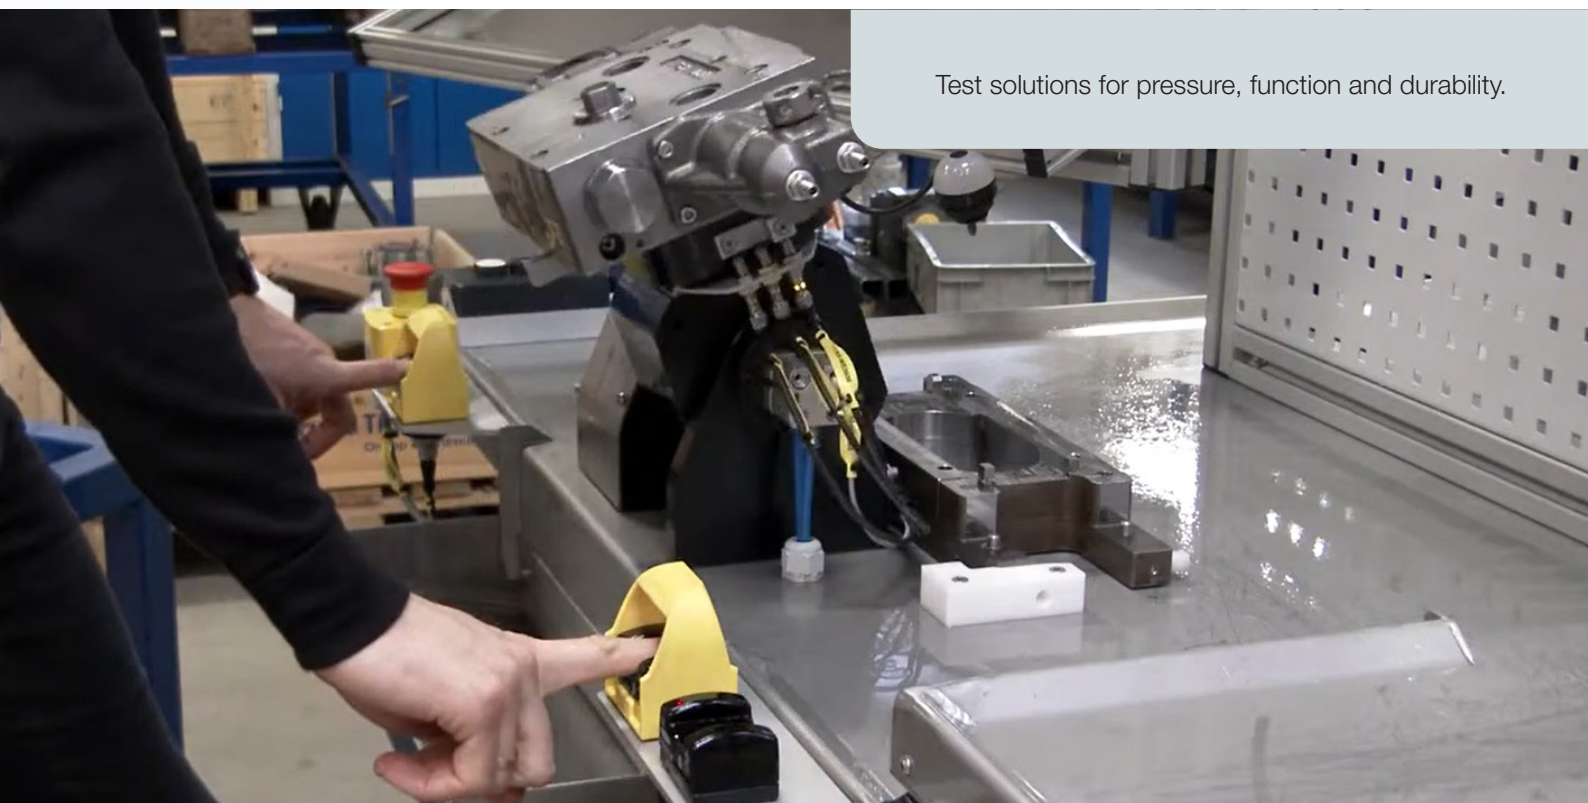

Energy savings and sustainability

In production, supplied systems as well as our organisation we incorporate energy savings and the care for our environment. We incorporate smart energy saving drives and re-use mechanical energy when possible.

Naturally our high quality and well thoughtful solutions contribute to safe operation, efficient and responsible use. Our systems are almost entirely recyclable.

Testsolutions for hydraulic components.

Test solutions for pressure, function and durability.

Easy web ordering and advise of more than 10.000 components from stock

Strong brands – high quality
